

Plasma In-Person Certification Course (2 Days)

Our **2-Day Plasma Fibroblast In-Person Certification Course** is a comprehensive, hands-on training designed for licensed aesthetics professionals looking to safely and confidently perform plasma fibroblast treatments. This immersive course combines in-depth theory with extensive live model practice to ensure strong clinical understanding and practical skill development.

Throughout the course, students will gain a solid foundation in **plasma technology, skin anatomy, treatment planning, and safety protocols**, while learning how to properly assess clients, identify contraindications, and deliver effective, results-driven treatments. Emphasis is placed on **client safety, proper technique, and ethical practice** in accordance with industry standards.

Participants will observe instructor demonstrations and complete **supervised hands-on treatments on two live models**, allowing students to build confidence, refine technique, and understand real-world treatment outcomes. Advanced topics such as complication prevention, aftercare management, and realistic client expectations are also covered.

This course is ideal for professionals seeking to expand their service offerings with a **non-surgical skin tightening and rejuvenation treatment**, while maintaining the highest level of care and professionalism.

Prerequisite Required – Previous Aesthetics/Esthetics training or Skin Fundamentals Course & Blood Born Pathogen Certificate
